Farmers Accelerating Research in Materials Science

FEBRUARY 23-25, 2022
PARSONS AND PITTSBURG, KS

Register at www.pittstate.edu/FARMS

FARMS is a collaborative "day in the life" workshop that uncovers details of every challenge - large and small - that agricultural producers face from sunup to sundown. Through this exchange, scientists gain valuable insights into problems that can be addressed through advances in plastics and polymers. FARMS is led by K-State county extension agents, the Kansas Polymer Research Center at Pittsburg State University, the Macromolecules Innovation Institute at Virginia Tech, and the Biodesign Center for Sustainable Macromolecular Materials and Manufacturing at Arizona State.

The agenda includes:

- Evening reception at the Kansas Polymer Research Center at Pittsburg State University
- Full day workshop at the Southeast Research and Extension Center, Parsons, KS
- Half-day of planning and proposal writing for scientists at the Foundry at Block22, Pittsburg, KS
